

EXPERT FOR STANDARDS AND REGULATIONS IN THE FIELD OF AUTOMOTIVE SECURITY (M/F/D)

Are you interested in the latest technologies, exciting projects and a great team that would like to welcome you into its midst? Perfectly. Then enrich our team!

At Zielpuls, we focus on a very specific field of activity: technology-oriented management consulting. Our team forms the bridge between strategic consulting and technical service providers. Together we plan, develop and coordinate overall technological solutions.

Tasks at the pulse of time

- You are passionate about providing expert advice to the customer in cooperation with the project and line managers
- You observe the current developments in regulation and standardisation projects, especially in the area of automotive cyber security, and maintain a relevant network with internal and external stakeholders.
- You advise our customers on the interpretation and implementation of the requirements from the standards and regulations in existing frameworks and processes.
- You also support our customers in the conception, creation and implementation of awareness and training measures.
- In addition, you will work closely with our interdisciplinary automotive security team and act as both a technical and methodological multiplier (e.g. through coaching or training) across project boundaries – you will be there when your colleagues are at a loss.
- With increasingly networked and complex vehicle functions and future E/E architectures, you keep an eye on the security requirements, also across different development areas, and support the planning and implementation of security audits/reviews.

Our offer makes your heart beat faster

- Look forward to a permanent job in a cross-sector technology consultancy where you can make a lot of things happen. For you, this means: the best prospects right from the start!
- Very good remuneration and a comprehensive package of attractive company benefits – because we appreciate your daily commitment.
- Flexible working hours, home office and flexitime – so that you can pursue your job without worries.
- An open and friendly corporate culture with flat hierarchies and short lines of communication – because this is the only way your ideas can be implemented quickly.
- Promotion of your personal and professional development through our in-house “Technology and People Academy”, individual coaching as well as customised expert tracks and certifications (e.g. Scrum) – because you can further your education with us in a targeted manner.
- Internal roles possible (e.g. coaching, recruiting) – if you also want to get involved outside your projects
- Numerous additional benefits, such as our company events (e.g. skiing, project training camp, get-together) as well as free drinks and more – so that we grow even stronger together as a team.
