

SECURITY AND RISK ANALYSIS EXPERT (M/F/D)

Are you interested in the latest technologies, exciting projects and a great team that would like to welcome you into its midst? Perfectly. Then enrich our team!

At Zielpuls, we focus on a very specific field of activity: technology-oriented management consulting. Our team forms the bridge between strategic consulting and technical service providers. Together we plan, develop and coordinate overall technological solutions.

Tasks at the pulse of time

- You are the competent contact person for our customers when it comes to highly innovative topics and concepts – thanks to you, everything simply runs smoothly.
- You carry out well-founded cyber security threat and risk analyses in the automotive environment on the basis of standards, such as ISO/SAE 21434, and derive measures for the elimination of weak points from this.
- You also evaluate the security concepts of our customers and create recommendations for action.
- Your heart beats faster when you are allowed to deal with new challenges (e.g. UNECE WP.29) and work in a team with the latest methods and technologies.
- With vehicle functions and future E/E architectures becoming increasingly networked and complex, you keep an eye on the overall security, also across different development areas.
- When developing measures to minimise existing security risks, you are always guided by the state of the art and weigh up the existing influencing variables.
- To this end, you observe current developments, especially in the area of automotive cyber security, and maintain a network with internal and external stakeholders.
- In addition, you drive the expansion of the automotive security field and contribute your experience and ideas.
- You also multiply your knowledge within the company, for example through technical coaching or the development of training courses.
- You inspire the customer even before projects arise in the acquisition of new topics and business areas.

Our offer makes your heart beat faster

- You can look forward to a permanent job in a cross-sector technology consultancy where you can make a lot of things happen. For you, this means the best prospects right from the start!
- Very good remuneration and a comprehensive package of attractive company benefits – because we appreciate your daily commitment.
- Flexible working hours, home office and flexitime – so that you can pursue your job without worries
- An open and friendly corporate culture with flat hierarchies and short lines of communication – because this is the only way your ideas can be implemented quickly
- Support for your personal and professional development through our in-house “Technology and People Academy”, individual coaching as well as customised expert tracks and certifications (e.g. Scrum) – because with us you can continue your education in a targeted manner
- Possibility to take on internal roles (e.g. coaching, recruiting) – if you also want to get involved outside your projects
- Numerous additional benefits, such as our company events (e.g. skiing, project training camp, get-together) as well as free drinks and more – so that we grow together even more as a team
