

AUTOMOTIVE SECURITY PENETRATION TETER (M/F/D)

Are you interested in the latest technologies, exciting projects and a great team that would like to welcome you into its midst? Perfectly. Then enrich our team!

At Zielpuls, we focus on a very specific field of activity: technology-oriented management consulting. Our team forms the bridge between strategic consulting and technical service providers. Together we plan, develop and coordinate overall technological solutions.

Tasks at the pulse of time

- You are the competent contact person for our customers when it comes to highly innovative topics and concepts – thanks to you, everything runs smoothly.
- Your heart beats faster when you independently deal with the conception, execution and documentation of penetration tests, both at component and vehicle level, as well as in connection with back-end systems.
- You work closely with our interdisciplinary automotive security team.
- You will apply the latest attack scenarios, methods and tools and will develop yourself further in the field of automotive security on your own initiative.
- You support the development of our Automotive Testing Lab and bring in your experience and ideas
- With vehicle functions and future E/E architectures becoming increasingly networked and complex, you keep an eye on the overall security, also across different development areas

Our offer makes your heart beat faster

- You can look forward to a permanent job in a cross-sector technology consultancy where you can make a lot of things happen. For you, this means the best prospects right from the start!
- Very good remuneration and a comprehensive package of attractive company benefits – because we appreciate your daily commitment.
- Flexible working hours, home office and flexitime – so that you can pursue your job without worries
- An open and friendly corporate culture with flat hierarchies and short lines of communication – because this is the only way your ideas can be implemented quickly
- Support for your personal and professional development through our in-house “Technology and People Academy” , individual coaching as well as customised expert tracks and certifications (e.g. Scrum) – because with us you can continue your education in a targeted manner
- Possibility to take on internal roles (e.g. coaching, recruiting) – if you also want to get involved outside your projects
- Numerous additional benefits, such as our company events (e.g. skiing, project training camp, get-together) as well as free drinks and more – so that we grow together even more as a team

Your profile brings us to our goal

- You bring practical experience or a successful degree with a focus on IT security, computer science, electrical engineering or a comparable field of study.
- Knowledge of penetration testing of embedded software systems (embedded hardware skills are a plus) and their relevant interfaces as well as of current attack methods and typical attack patterns
- First practical experience, preferably in the automotive industry
- Certifications, for example from Offensive Security (OSCP, OSEP or OSCE) are desirable
- Ideally experience in one or more of the following areas: Vulnerability scanning, IT security, cryptography, reverse engineering or bus systems in automobiles
- Hands-on mentality and fun in developing creative solutions
- Ability to work in a team and enthusiasm for new technologies
- Very good written and spoken German and English skills
